

# GREEN STATEMENT

Continuing in the tradition of Haviland Corporation being a good steward of the environment, we are committed to raising the awareness of protecting the environment within the cleaning industry and our own community.

## RUBBER

Rubber, one of the main components for the manufacturing of our products is 100% reusable. It is post-consumer waste, which is reclaimed from the waste stream. Our blades can be reused in such things as playground fill, rubber flooring, wallets, bags, windshield wiper blades, park walkways, and even mulch. Haviland Corporation works to reuse as a member of [www.recycle.net](http://www.recycle.net). By reusing, disasters such as the August 1999 Ohio fire of a tire dump, seen up to 60 miles away, can be prevented.

## METAL

Haviland squeegee frames have been reported to last more than 30 years. No need to get rid of the Haviland squeegee frame when your blade has worn out, just use a Haviland replacement blade and keep using the same frame. If you do want a new frame, what better material to recycle than America's #1 recycled material-STEEL! Yes, most of our squeegees are made of steel, but we also use aluminum, zinc, and brass; all of which are recyclable and can be used in a multitude of different ways. By recycling metal, the earth's natural resources are being preserved; energy is being saved as well as millions of dollars!

## PLASTIC

Only a small sector of our product line is composed of plastic, which is easily recyclable with endless possibilities for reuse. There is great cost savings whenever plastic is reused. Haviland Corporation has recently added an "environmentally friendly" hard plastic squeegee. The color-coded Jubilee squeegee is built to last and has Haviland replaceable rubber blades.

## WATER

Water conservation can also be achieved through the use of Haviland products, our Big Badger water-broom being a prime example. The waterbroom uses a third less water and is three times faster than a standard sprayer. It is also built to last, featuring corrosion resistant brass fittings, aluminum piping, and rust proof casters, all of which are recyclable.

## PACKAGING

Most of our shipping material is cardboard. Not only is it a recyclable and biodegradable item, but Haviland uses packaging that is made from recycled material! Any plastic bags which are used for single packaging can be put with your recyclable plastic material.

Haviland Corporation products have always been manufactured with earth's natural resources in mind. Since the company's inception we have produced products that will last, can be reused, and recycled.
